BAYINFOTECH
TRUSTED PARTNER FOR YOUR CLOUD JOURNEY

June 2019 Newsletter

Current Highlights

Next week, BayInfotech (BIT) will be showcasing **Cisco's Multi-Domain Architecture demo** in Cisco Live 2019 Conference at DSI Booth at World of Solutions.

Introducing **MANAGED SECURED SD-WAN** and **LIFECYCLE AS A PRACTICE** Services. Let BIT support you on your journey to a successful business. Let's Get it Started!

Be boundless - CISCO Multi-Domain Architecture Use Cases

Use Case # 1
Cisco ACI and SDWAN Integration

This demo showcases a use case where a customer wants a mechanism to quickly deploy services, and securely configure policy from the WAN through to the DataCenter. With a single Ansible call, an application can be deployed, and link choices can be made programmatically to either save the customer money, or enhance performance.
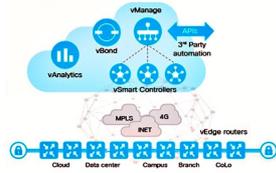

Use Case # 2
Cisco SDWAN Integration with AppD

Businesses often want to make routing and policy decisions using factors outside of traditional WAN metrics, these may be decisions based on environment factors, such as time of day, weather reports, dollar cost of links, etc...SDWAN makes the process of changing links based on external influences easy through its programmatic REST based interface. AppDynamics presents the ability to monitor application performance using a multitude of metrics, from business transaction speed to end user experience. This demo utilizes AppDynamics application performance data as the external factor to choose
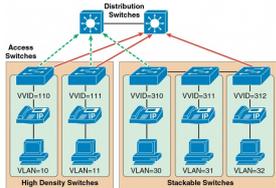

Some of BayInfotech (BIT) current projects

SD-WAN Proof of Value

SD-WAN, a part of SDN for the WAN, and its overlay approach opens up a world of simplicity not just for on-premises implementation, but also for cloud deployments. BayInfotech had recently showcased the POV(proof of value) for Cisco's end customer which indeed helped them in speeding up the elimination the manual building of WANs and gained agility for quick configuration updates or IOS upgrades to meet changing business needs. Using solutions from BayInfotech and Cisco, Customer achieved its goal and much more.

Network Infrastructure

As your business expands, so does your network. Running a growing network smoothly depends on making sure each part of your infrastructure is being managed effectively and that being said network assessment is a good place to start with. Recently, BayInfotech created the network assessment report for one of the Cisco's end customer where we evaluated their network configuration, identified security holes, and suggested the changes that will maximize in efficiency of their network and plan for future growth.

Giving back to community

Reyna's Cure Fundraiser

We are truly honored to be able to support the Reyna's CDKL5 Cure, along with HOPE4HARPER as they recently hosted an event: Flash Mob by Bombay Jam. It was a beautiful day at Evergreen Village Square full of love and positive energy while the flashmob showed off some awesome moves. Cherished by all that attended, it was a moving event that raised funds and created awareness in the community. Credit for this great shot goes to Random Drifts.

Reyna's Cure is raising funds for a clinical trial for a CDKL5 cure. This cause is inspired by brave, beautiful, little Reyna Jogani and all the children affected by this genetic disorder that results in severely impaired brain development.

Employee Testimonial

BayInfotech Employee Testimonial Video

Watch a testimonial from an actual BayInfotech employee. Hear from one of our own team members about how great of an experience working with BayInfotech is. We are honored by all the awesome things he has to say.

Honour of presenting an award

MBEIC Award Presentation Speech

BayInfotech's Maulik Shyani is the chair for the MBEIC (Minority Business Enterprise Input Committee) of the Western Regional Minority Supplier Development Council (WRMSDC). He

gave a great [speech](#) at the WRMSDC Black Tie Awards and Fundraiser Gala, and had the honor of presenting an award.
